

Codehouse

COMPANY PROFILE

At Codehouse we do not consider it foolish to have an understanding of the world in which our solutions are to be used. On the one hand this makes us a serious business partner and on the other hand it turns us into an oxymoron that should only exist in fiction: IT-nerds with business awareness.

With that self-awareness coded into our sub as well as waking conscienceness, we relate to our clients needs and find meaning in a universe made up of 10 elements: 1 and 0. But since only 87% of our clients would recommend us today¹, we gladly dig deeper into the binary toolbox.

What does this mean? It means that Codehouse is an IT-enterprise in development – literally. At Codehouse we develop tailored web-solutions based on Microsoft technologies. Translated into practice, this means that we deliver value-adding business solutions to our clients – solutions that often include close integration to other critical business systems such as HR-management, payment systems or management accounting.

To the enlightened this means that we have the highest level of expertise in the integration of Sitecore, Navision, Axapta, C5, SharePoint, Exchange, MS CRM and Active Directory. For the more enlightened, this means that Codehouse is a Sitecore Solutions Partner, a Microsoft Gold Partner and a ForwardSearch Partner which (for the even more enlightened) means that Codehouse has obtained Microsoft certification in Custom Development Solutions and Information Worker Solutions and navigate in a sphere filled with .NET, W3C, XHTML, CSS, XSLT, Office Systems add-ins, OpenXML, Widows Forms/WPF and Microsoft SharePoint.

Codehouse engaged in a close collaboration with Sitecore in 2002 which has led to a position as one of the most experienced Sitecore Partners in Denmark as well as the United Kingdom

¹ The result of a questionnaire survey related to the Microsoft Gold Partnership, September 2008

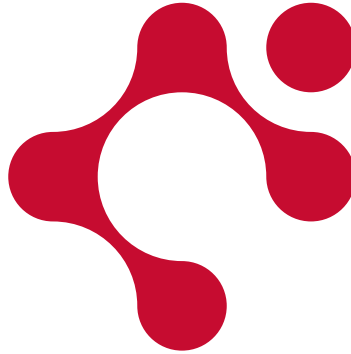

today. Additionally, Codehouse has, on behalf of Sitecore, trained and educated Sitecore users, administrators and developers since 2004.

Our way To prevent our clients from being dissociated from the developmental process in regards to their IT-solution – and to prevent our developers from being dissociated from the world in which their solutions have to operate – we focus on making the distance from client to developer as short as possible. As a client with Codehouse you will not be communicating just with a project manager, who will then pass on the decisions to the developer. As a client with Codehouse you will also be communicating directly with the developer while the project manager acts as chaperon.

History Codehouse was born in 2000 by three fellow students who thought they would be able to provide value-adding, web-based business solutions. They have succeeded to an extent that has made it possible for Codehouse to transcend national boundaries and become firmly rooted in both Copenhagen and London.

Despite growth and megalomania Codehouse still lives in accordance with the same philosophy – now formulated in our mission statement:

“With a foundation on Microsoft-based technologies, Codehouse develops - in close cooperation with its stakeholders and with dedicated, competent and trustworthy project teams - bespoke, web-based business solutions and always with a high degree of quality”

Codehouse was reorganized in 2007 to give our clients an even better experience and to enable Codehouse to expand without compromising the ability to deliver the personal touch.

Today Codehouse is made up of Codehouse Group, responsible for finances, HR, central IT-infrastructure, marketing and partner agreements, and Codehouse Copenhagen and Codehouse London.

Codehouse in its present state numbers a considerable amount of brains of which the vast majority are equipped with invisible developer capes carrying titles like Sitecore Certified Developer and Microsoft Certification (MCAD, MCPD or MCTS). Everybody contributes in their unique way to create value-adding business solutions to our clients. The developers do it in their entirely own way: **best coding practices at all times.**
